Template Pack and Pool Color Textures [Download link here](#)

1. Use the link above for your Pool Studio Content Package (this should work with VisTerra). You can use to install the templates but it also has updates and fixes to several other templates.
2. Download and save the file to your computer and double click the file to install or open Pool Studio. Click on *diamond shape pool* in the top left-hand corner of the window, then go to import, then *My Content* and navigate to where you downloaded the file. Select the file, click to open and follow prompt.
3. If the tab does not show up you will have to enable it. You may need to close and restart the program for the change to take effect.
4. This will give you a new Latham Fiberglass - Classic Grand tab and the models will be listed in there.

Materials

1. Once you have saved the "Pool Interior Textures" folder to your computer, extract it.
2. To apply the pool colors, go to the *11 Materials* tab under *Quick Selection* and select Interior.
3. Select *Import Image*
4. Navigate to where you extracted the download file, select A, then click open. You should see the interior pool change to the color you selected. Both low and high Res textures available, low res should be used for laptop installs. If you used the low res color option, set the scale on the material to 50% to accurately represent the color.

If you need help with the installation of the content package feel free to contact me.
